20 YEARS OF EXPERIENCE IN EXHAUST TECHNOLOGY

ABOUT US

After a research, planning and development phase by our engineers between 2010-2011, Advanpure was founded in 2012.

In the following years, the cleaning systems were professionally further developed and an extensive partner network was built up.

The product portfolio was steadily expanded, with the addition of conversions and retrofits for cars, trucks, buses and construction machinery, as well as the trade in original products (OEM) in the retrofit business and aftermarket. Advanpure has been offering its self-developed cleaning systems on the market since 2016. Customers include car and commercial vehicle workshops, bus companies, haulage companies and many more... After a conformity check by the KBA, the group starts developing its own exhaust aftertreatment systems in 2021 and thus act as a manufacturer. The teams consist of around 30 employees at three locations in Germany, Poland and the Czech Republic.

COMPANYHISTORY

Baumot: Development of first EAT systems

With more than 60,000 retrofitted ON- and OFF-road vehicles, Baumot was one of the leading manufacturers of AGN systems. Today, many employees and all licences belong to the Advanpure Group.

1988-2011

Foundation of Advanpure

After a year-long development phase for a new cleaning method of EAT systems, Advanpure was founded in 2012. The process makes it possible for the first time to regenerate up to 97% of the DPF without damaging the core or shell.

2012-2020

Advanpure becomes a manufacturer

With the takeover of the Baumot product portfolio in 2021, Advanpure produces its own AGN systems for the first time. In the coming years, EAT systems were developed for hardware retrofitting for various passenger car models to the EURO 6 standard.

2021-2023

*EAT: Exhaust gas aftertreatment

OUR VISION

Advanpure GmbH has focused on the production of exhaust aftertreatment systems, their cleaning methods and the associated processes, as well as the sale of cleaning systems, and is therefore particularly committed to protecting the environment.

The highest certified quality standards are a matter of course - from the product development of new exhaust gas aftertreatment and cleaning systems, to the selection of cooperation partners, to environmental management and occupational safety.

useful life of vehicles

BUSINESS AREAS

360° EXHAUST TECHNOLOGY

Advanpure specialises in three business areas: the cleaning of particulate filters, the sale of cleaning machines for particulate filters and the manufacture and retrofitting of exhaust aftertreatment systems for all applications.

Manufacture of systems for Exhaust gas aftertreatment

We are sustainably committed to creating an economic and ecological justification for every diesel engine by retrofitting vehicles with the latest exhaust aftertreatment systems.

Distribution of machines for cleaning of DPF, SCR & catalysts

Advanpure cleaning machines make it possible to restore filter performance quickly and easily. The machines are designed for use in workshops, by fleet operators and in the automotive industry and meet the highest quality standards.

Cleaning and treatment of Exhaust gas aftertreatment systems

The company specialises in restoring the performance of particulate filters through professional cleaning techniques, offering a cost-effective alternative to replacing damaged filters.

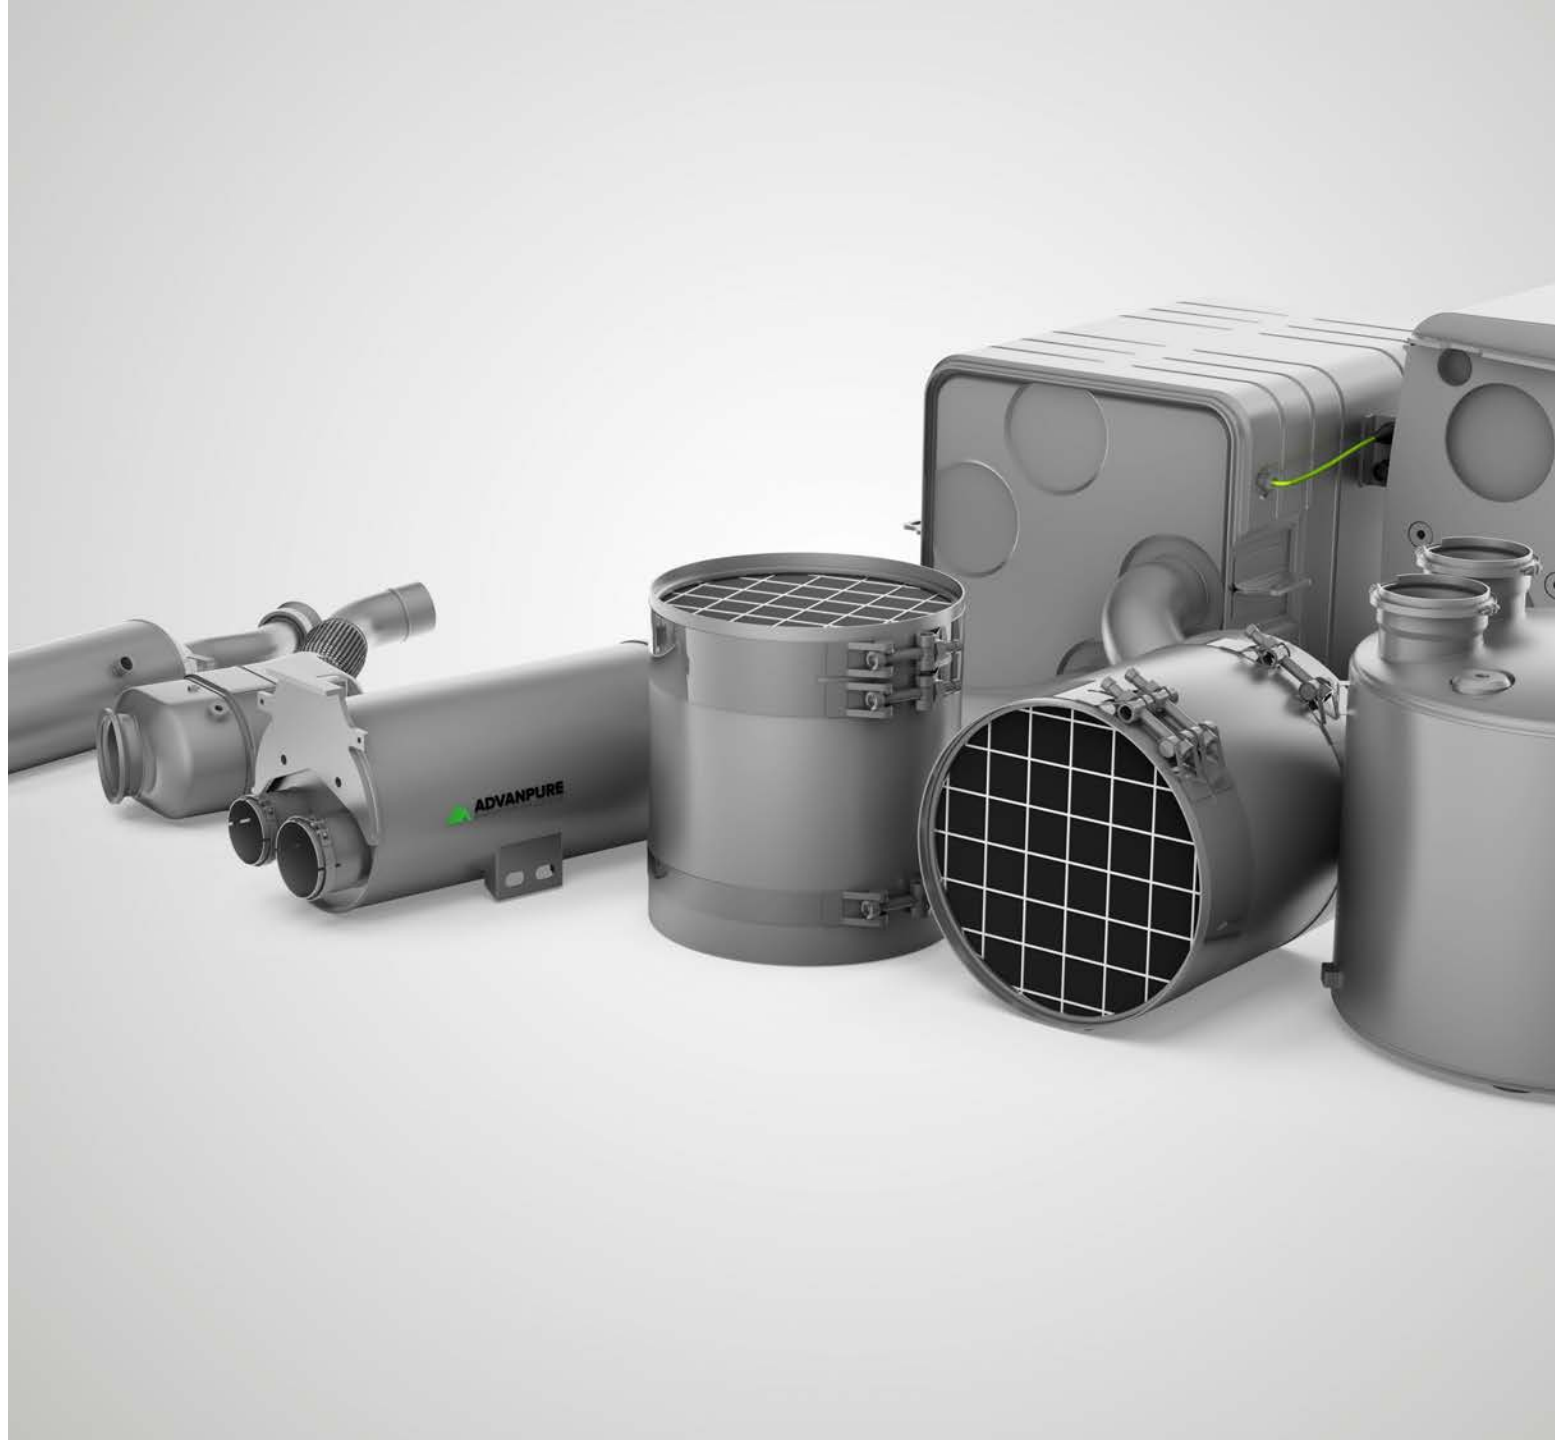

BUSINESS AREAS

EXHAUST GAS AFTER-TREATMENT SYSTEMS

As a manufacturer, Advanpure GmbH offers professional retrofitting of diesel particulate filters for passenger cars, construction machinery, agricultural machinery, light and heavy trucks, motor homes, mobile machinery and stationary equipment, as well as a nationwide service for vehicle owners and companies.

These retrofits are a cost-effective alternative to purchasing a new vehicle and allow customers to continue using their existing vehicle while reducing environmental impact.

BUSINESS AREAS

CLEANING MACHINES

EFFECTIVE AND SUSTAINABLE: ADVANPURE CLEANING MACHINES

Advanpure DPF cleaning systems are designed to gently clean DPFs and catalytic converters without cutting and welding. They feature high quality construction for commercial use and are applicable for all common vehicle types such as cars, trucks, buses and construction machinery. Our products contribute to sustainability and clean without sacrificing quality.

AD5000

Highly efficient cleaning system for DPF and catalytic converters of cars & vans

AD7000

Cleaning system for DPF and catalytic converters of trucks & construction machines

BUSINESS AREAS

PROFESSIONAL CLEANING SERVICE

Don't feel like cleaning yourself? Then use our professional cleaning service and send your exhaust aftertreatment systems to be cleaned directly to us or become a cleaning partner and we will clean for your customers on your behalf.

- 24 hours express service
- Cleaning for all DPF and SCR systems
- Cleaning protocol for each cleaning
- Special conditions for cleaning partners
